DEDICATION

This edition of the Report Card is dedicated to the memory of attorney Norma E. Bradway (1944-2004), whose work as Deputy Director and Assistant Deputy Director of the Indiana Division of Mental Health and Addiction ensured clear, rational standards for mental health and addiction services for Indiana citizens. Her commitment to access to quality care for the Division's consumers was an inspiration to all who knew her.

ACKNOWLEDGMENTS

DMHA Director: Cathy Boggs

Project Director: Paula J. Barrickman

Project Manager: Michael C. Connor

Data Analyst: Yuri Kirilusha

Deputy Director: Sue Lummus

Printed: April 2007

Overview

The Indiana Family and Social Services Administration (FSSA) Division of Mental Health and Addiction (DMHA) is pleased to publish this Consumer Satisfaction Survey Report Card for consumers, their family members, government officials, providers of mental health services, and all other stakeholders interested in mental health care service delivery in Indiana. This report card provides information about consumer satisfaction with Indiana mental health services and service providers.

The 37 mental health care agencies in this report have contracts with DMHA to provide services. Under Indiana law (P.L. 40), these providers must offer the same set of ten mental health services; this is called the “continuum of care” for eligible Indiana citizens. To locate the nearest provider or the one this report card may indicate is the best for a specific need; please go to the Indiana Division of Mental Health and Addiction map of providers: <http://www.in.gov/apps/fssa/hap/> If there are further questions, please call the Consumer Service Line at 800-901-1133 or call DMHA directly at 317-232-7800.

The data in this report card came from some of the people (a sample) who received services during State Fiscal Year 2005 (July 1, 2004 to June 30, 2005). Two groups of consumers were surveyed for this report card: (1) Adults with serious mental illness (SMI), and (2) Parents/caretakers of children and adolescents with serious emotional disturbance (SED). If you have questions about services, please visit the Indiana Division of Mental Health and Addiction website at: <http://www.in.gov/fssa/mental/>

People seeking mental health services can be enrolled in the Hoosier Assurance Plan (HAP) when they meet the definitions of SMI and SED (see the Glossary for more information) and meet HAP income criteria of annual income at or below 200% of the federal poverty level. Adults and children with chronic addiction were not surveyed for this report card.

Most of the mental health care agencies shown in this report provide services for both adults (SMI) and children/adolescents (SED), except for five providers who serve only children and adolescents. Of those five providers, graphs for children are shown in this document for St. Vincent Stress Centers (#1007), The Villages of Indiana (#1006), Children’s Bureau of Indianapolis (#1009), and PSI Services (#1468). There is no graph for Choices, Inc. (#1019) because it is a joint venture of four other providers that are shown separately.

Brief Summary of the Findings

Adult consumers rate all Indiana mental health service providers at about the same level of satisfaction. Adult consumers indicate that service outcomes could be better, which is true for all Midwestern states and all states nationally.

Parents/caretakers of children and adolescents with SED also rate service providers at about the same level of satisfaction. Again, all providers of child services could have scored higher on outcomes of services, but this finding is true for all Midwestern states and all states nationally. See Graphs 5 through 14 for detailed information.

Consumer Demographic Information

All data were collected by Indiana University Center for Survey Research (CSR) and submitted to the Indiana DMHA. After DMHA performed final data revisions, there were 4,012 completed surveys (2,006 adult surveys and 2,006 parent/caretaker surveys). The tables below illustrate demographic information for both groups of consumers.

MHSIP Survey (Adults with SMI) Demographics

Table 1. MHSIP Adult Survey, Gender

	Number	Percent
Male	701	34.9%
Female	1,305	65.1%
Total	2,006	100.0%

Table 3. MHSIP Adult Survey, Age

	Number	Percent
18 or less	23	1.1%
19-20	51	2.5%
21-30	349	17.4%
31-40	445	22.2%
41-50	608	30.3%
51-60	378	18.8%
61-70	111	5.5%
70+	41	2.0%
Total	2,006	100.0%

Table 2. MHSIP Adult Survey, Race & Ethnicity

	Number	Percent
African Amer/Black	189	9.4%
Alaskan Native	1	.0%
American Indian	4	.2%
Asian	3	.1%
Native Hawaiian	0	.0%
White	1,752	87.3%
Multiracial	7	.3%
Other	50	2.5%
Total	2,006	100.0%

Hispanic	65	3.2%
Non-Hispanic	1,941	96.8%
Total	1,967	100.0%

YSS-F Survey (Parents/Caretakers of Children/Adolescents with SED) Demographics

Table 4. YSS-F Parent/Caretaker Survey, Gender

	Number	Percent
Male	1,199	59.8%
Female	879	40.2%
Total	2,006	100.0%

Table 6. YSS-F Parent/Caretaker Survey, Age

	Number	Percent
1-5	177	8.8%
6-10	702	35.0%
11-15	893	44.5%
16-18	234	11.7%
Total	2,006	100.0%

Table 5. YSS-F Parent/Caretaker Survey, Race & Ethnicity

	Number	Percent
African Amer/Black	371	18.5%
Alaskan Native	0	.0%
American Indian	4	.2%
Asian	2	.1%
White	1,501	74.8%
Multiracial	75	3.7%
Other	53	2.6%
Total	2,006	100.0%

Hispanic	86	4.3%
Non-Hispanic	1,920	95.7%
Total	2,006	100.0%

State, Regional, National, & Phone Scores

Results shown in Graphs 1 and 2 should be interpreted carefully due to the variety of methods used to collect data across participating states. While Indiana uses a telephone data collection method, which tends to result in slightly lower satisfaction scores, other states use a variety of methods, including in-person interviews (which give higher satisfaction results) and mailed surveys (which give satisfaction results similar to telephone interview results).

This year regional and phone results were available for the MHSIP survey, and results of both are shown in Graph 1 below. Note that the Midwest Region is comprised of Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

Graph 1. MHSIP Adult Survey, State, Regional, National, & Phone Method Scores

Graph 2. YSS-F Parent/Caretaker Survey, State, Regional, & National Scores

State Fiscal Year Scores Comparisons

This is the fourth year of the new Consumer Satisfaction Survey Report Card format. Graphs 3 and 4 below show the average scores for each of the four state fiscal years for each survey.

Graph 3. MHSIP Adult Survey, State Fiscal Years 2002 to 2005

Graph 4. YSS-F Parent/Caretaker Survey, State Fiscal Years 2002 to 2005

Understanding Graphs 5 through 14: Average Scores and Interval Scores

Graphs 5 through 9 on the following pages compare provider scores on the five MHSIP Adult Survey categories, which are General Satisfaction, Good Service Access, Quality and Appropriateness, Participation in Treatment Planning, Positive Service Outcomes. Graphs 10 through 14 compare provider scores on the five YSS-F Parent/Caretaker Survey categories, which are General Satisfaction, Good Service Access, Cultural Sensitivity, Participation in Treatment Planning, Positive Service Outcomes.

Statistical tests were performed to determine if there were any true statistical differences in consumer satisfaction among the service providers. Numbers in the graphs that are between 1 and 2.5 indicate consumer satisfaction, while numbers above 2.5 indicate consumer dissatisfaction. For example, Graph 5 shows Provider 404 as having scores of 1.59 to 2.04. These scores are between 1 and 2.5, indicating that adult consumers are satisfied on the General Satisfaction category.

Diamond shapes (◆) indicate the average score (also referred to as the “mean” score), which can be found in Appendices 7 and 8. Diamond shapes further to the left indicate higher satisfaction.

Graph 5. MHSIP Adult Survey, General Satisfaction

GRAPH SUMMARY: In general, adult consumers of mental health services are equally satisfied with the services they receive from any of the mental health care agencies. Statistically, adult consumers rated all providers the same on the General Satisfaction category. Appendix 6 shows the results of a one-way analysis of variance, and absolutely no significant differences between providers were found.

Graph 6. MHSIP Adult Survey, Good Service Access

GRAPH SUMMARY: Adult consumers of mental health services are equally satisfied with the access to services provided at any of the mental health care agencies. Statistically, adult consumers rated all providers the same on Good Service Access satisfaction. Appendix 6 shows the results of a one-way analysis of variance, and absolutely no significant differences between providers were found.

Graph 7. MHSIP Adult Survey, Quality & Appropriateness

GRAPH SUMMARY: Adult consumers of mental health services are equally satisfied with the quality and appropriateness of services provided at any of the mental health care agencies. Statistically, adult consumers rated all providers the same on the Quality and Appropriateness satisfaction category. Appendix 6 shows the results of a one-way analysis of variance, and absolutely no significant differences between providers were found.

Graph 8. MHSIP Adult Survey, Participation in Treatment Planning

GRAPH SUMMARY: Adult consumers of mental health services are equally satisfied with their participation in treatment planning at mental health care agencies. Statistically, adult consumers rated all providers the same on the Participation in Treatment Planning satisfaction category. Appendix 6 shows the results of a one-way analysis of variance, and absolutely no significant differences between providers were found.

Graph 9. MHSIP Adult Survey, Positive Service Outcomes

GRAPH SUMMARY: Adult consumers of mental health services are satisfied equally with outcomes at any of the mental health care providers. The overall satisfaction with outcomes could be higher, but these same results are also found in the Midwestern states and nationally. Statistically, adult consumers rated all providers the same on Positive Service Outcomes satisfaction. Appendix 6 shows the results of a one-way analysis of variance, and absolutely no significant differences between providers were found.

Graph 10. YSS-F Parent/Caretaker Survey, General Satisfaction

GRAPH SUMMARY: In general, parents/caretakers of children who receive mental health services are equally satisfied with services they receive from any of the mental health care agencies. Statistically, parents/caretakers of child consumers rated all providers the same on the General Satisfaction category (see Appendix 6). Appendix 6 shows the results of a one-way analysis of variance, and no significant differences between providers were found

Graph 11. YSS-F Parent/Caretaker Survey, Good Service Access

GRAPH SUMMARY: In general, parents/caretakers of children who receive mental health services are equally satisfied with the service access they receive from any of the mental health care agencies. Statistically, parents/caretakers of child consumers rated all providers the same on the Good Service Access category (see Appendix 6). Appendix 6 shows the results of a one-way analysis of variance, and no significant differences between providers were found

Graph 12. YSS-F Parent/Caretaker Survey, Cultural Sensitivity

GRAPH SUMMARY: In general, parents/caretakers of children who receive mental health services are equally satisfied with cultural sensitivity they experience from any of the mental health care agencies. Statistically, parents/caretakers of child consumers rated all providers the same on the Cultural Sensitivity category (see Appendix 6). Appendix 6 shows the results of a one-way analysis of variance, and no significant differences between providers were found

Graph 13. YSS-F Parent/Caretaker Survey, Participation in Treatment Planning

GRAPH SUMMARY: In general, parents/caretakers of children who receive mental health services are equally satisfied with the participation in treatment planning they receive from any of the mental health care agencies. Statistically, parents/caretakers of child consumers rated all providers the same on the Participation in Treatment Planning category (see Appendix 6). Appendix 6 shows the results of a one-way analysis of variance, and no significant differences between providers were found

Graph 14. YSS-F Parent/Caretaker Survey, Positive Service Outcomes

GRAPH SUMMARY: In general, parents/caretakers of children who receive mental health services are equally satisfied with service outcomes they receive from any of the mental health care agencies. Statistically, parents/caretakers of child consumers rated all providers the same on the Service Outcomes category (see Appendix 6). Appendix 6 shows the results of a one-way analysis of variance, and no significant differences between providers were found

Project Summary

This Consumer Satisfaction Survey Report Card for Hoosiers served in State Fiscal Year 2005 (July 1, 2004 to June 30, 2005) examines consumer satisfaction with mental health services provided by 37 state-contracted mental health care agencies in Indiana. Consumers surveyed were either adults with serious mental illness (SMI) or parents/caretakers of children and adolescents with serious emotional disturbance (SED) who were enrolled in the Hoosier Assurance Plan (HAP).

Indiana University Center for Survey Research (CSR) was contracted to perform this telephone survey of Indiana mental health consumers. Survey participants were a portion, or sample, of all the persons who received HAP services. Participants could refuse to participate in this survey and could refuse to answer any question in the survey.

Two well-developed, national-level survey instruments were used in this survey: The Mental Health Statistics Improvement Program (MHSIP) 28-Item Adult Consumer Satisfaction Survey (“MHSIP survey”) and the Youth Services Survey for Families (“YSS-F survey”), which collects data on parent/caretaker satisfaction with child/adolescent services. Currently, 47 states are using the MHSIP survey and 38 states are using the YSS-F survey. These survey data are used to fulfill Indiana’s Mental Health Block Grant reporting requirements, which helps ensure the receipt of over \$8 million dollars for adult and child mental health services. After final DMHA revisions to the data, there were 4,012 completed surveys; 2,006 for adults with Serious Mental Illness (SMI) and 2,006 for parents/caretakers of children/adolescents with Serious Emotional Disturbance (SED).

Just as was found last year, the “Participation in Treatment Planning” MHSIP adult survey category and the “Good Service Access” YSS-F parent/caretaker survey category may not give consistent results over repeated data measurements. Some caution should be used when interpreting any results of these categories. For example, no consumer satisfaction differences were found for either the MHSIP “Participation” category or the YSS-F “Good Access” category. This is interpreted to mean that all consumers were equally satisfied with all providers on these two categories. If these survey data are not measuring consistently, then this result may not be true and there may be some differences in consumer satisfaction.

The sample sizes were slightly improved over last year, and the survey results can be generalized to the larger populations served by providers. This means that the responses given by the consumers surveyed for this report are the same as responses that would be given by all consumers served at a given provider agency.

A variety of methods were used nationally to collect the MHSIP and YSS-F survey data. Telephone methods, like those used in Indiana, tend to result in lower scores. In general national MHSIP and YSS-F scores were higher than Indiana scores, but there were some areas where Indiana did better than or as well as certain types of scoring. In comparison with states in the same region as Indiana, Indiana averaged about the same in the MHSIP scores, but was below in the YSS-F scores. In the comparison with the phone methods, Indiana averaged about the same scores there as well. One bright spot was that Indiana did slightly better again in the YSS-F score for Cultural Sensitivity category than the regional and national scores.

In general, the MHSIP adult survey category results have stayed fairly stable across four State Fiscal Years (2002, 2003, 2004, and 2005) with all scores being no more than a point outside the range of the prior scores. On the YSS-F parent/caretaker survey, the SFY2005 scores, which are the focus of this report card, tended to be higher than or equal to the scores from SFY2004. The YSS-F scores appear to fluctuate more than the MHSIP scores. No statement can be made at this date about trends or changes in the survey scores. What is interesting about this data is that this was the first full year in which providers were able to respond to the changes in measurement that that occurred with the SFY 2002 report card. So far, no discernible trend has been detected.

Statistically, no providers of adult mental health services were found to be different from each other in terms of consumer satisfaction. Parents/caretakers of children and adolescents with SED did not indicate any statistical differences in their provider satisfaction

Individual Provider Graphs

In the section that follows, each service provider has one page that summarizes the results of the MHSIP adult survey and the YSS-F parent/caretaker survey (if appropriate). The individual provider results are compared to state and national scores. Because national scores are composed of the total percentage of positive responses received in the surveys, the results for the Indiana service providers are presented in the same way. Each survey has multiple questions that are aggregated into five categories, as explained in the “Project Methods” section of this report, and each provider graph reflects those five categories.

Project Methods

Sample Randomization

In State Fiscal Year 2005 (July 1, 2004 to June 30, 2005), 48,113 adult consumers with Serious Mental Illness (SMI) and 28,256 child/adolescent consumers with Serious Emotional Disturbance (SED) received public mental health services through DMHA-contracted mental health service providers. A portion (sample) of those consumers answered survey questions that asked about satisfaction with services received. To ensure that the responses from this sample of consumers could be reliably generalized to everyone who received services, a random per-provider sample was drawn from all consumers served.

To generate the sample, Microsoft Access software was used to assign a random number to each consumer enrolled during SFY2005. The number of consumers needed for each provider and each type of survey was calculated on the basis of an 8% confidence interval at an 80% confidence level. This number was multiplied by four to give the desired number to be selected. This list was then reordered by the random number and the first consumers up to the selected number per provider were chosen, resulting in a draw of over 16,000 individuals. If there were less than four times the number of needed consumers for a given provider, then all consumer names for that provider were drawn to achieve an adequate sample. See Appendices 1 and 2 for per-provider numbers served and number of surveys completed.

Once the sample was drawn, DMHA contacted service providers to acquire consumer information (name, phone number, etc.). This type of confidential information is not collected in DMHA databases, so it must be gathered from providers in order to perform the telephone survey. Consumers give their consent to be contacted when they enroll for services.

IU Center for Survey Research and the Telephone Survey

The Indiana Division of Mental Health and Addiction (DMHA) provided the sample and related consumer information to Indiana University Center for Survey Research (CSR), who were contracted to perform the telephone survey. CSR staff implemented a second randomization, selecting a portion of the adult (SMI) and parent/caretakers of child/adolescent consumers (SED) from the original sample. CSR then mailed a pre-survey letter that explained the telephone interview and asked for updated consumer information. For example, consumers were asked to call an “800” number to update their phone numbers. A significant number of consumers could not be located due to incorrect or missing phone numbers, as shown in Appendix 3.

Indiana University CSR staff (8 supervisors and 57 interviewers) performed the survey using a telephone method. CSR personnel receive at least 20 hours of training in interviewing techniques and specific training on the surveys used for this data collection effort. Phone calls were made to consumers from 03/23/06 to 08/31/06 (weekdays from 9:00 AM-10:00 PM, Saturdays 9:00 AM-1:00 PM, and Sundays 1:00 PM-9:30 PM). On average, each call lasted 9.3 minutes. If consumers were under the age of 18 (when services were received), the interview was conducted with a parent or guardian. Any consumer can refuse to participate in all or any portion of the telephone survey, and the telephone interviewers are trained to comply with such a request. As more surveys were needed, an iterative selection from the original sample occurred, pre-survey letters were mailed and phone calls made, until the required number of completed surveys was achieved. A final count of 6,197 adult survey *attempts* and 5,307 parent/caretaker survey *attempts* comprise the sample, for a total of 11,504 survey *attempts*. Survey *completion* totals were 2,009 surveys for adults with SMI and 2,016 surveys for parents/caretakers of child/adolescent consumers with SED, which is a 35% response rate. Appendix 3 shows the Final Dispositions of the telephone survey methodology.¹

¹ Based on guidelines for Final Disposition Codes established by the American Association for Public Opinion Research (AAPOR) Standard Definitions for Final Dispositions of Case Codes, 1998.

MHSIP Adult Survey and YSS-F Parent/Caretaker Survey

For the past two decades, the Mental Health Statistics Improvement Program (MHSIP) worked closely with the Substance Abuse and Mental Health Services Administration (SAMHSA) Center for Mental Health Services (CMHS), with the National Association for State Mental Health Program Directors Research Institute (NASMHPD/NRI), and with various states to develop national mental health data standards. Among the outcomes of this work are the two MHSIP survey instruments (new to the Indiana DMHA in SFY2003) used to collect data for this report card: The Mental Health Statistics Improvement Program (MHSIP) 28-Item Adult Consumer Satisfaction Survey (“MHSIP survey”) and the Youth Services Survey for Families (“YSS-F survey”) which collects data on parent/caretaker satisfaction with child/adolescent services.

The MHSIP survey was created by consumers, researchers, and policymakers, who worked together to identify consumer concerns and values. This group developed indicators of care in five categories and then developed survey questions for each indicator. The MHSIP survey is used to collect and report process data (which examines the interaction between the consumer and the healthcare system) and outcomes data (the results of that interaction).

Both the MHSIP and YSS-F surveys were developed as part of federal grant initiatives, such as the CMHS 16 State Project and the CMHS Data Infrastructure Grant #1 (DIG I) and #2 (DIG II) projects. The DIG Projects include all 50 states, the District of Columbia, and all U.S. territories. By using these surveys, Indiana achieves the goal of comparing Hoosier results to regional and national results. To view more data for Indiana and other states, please visit this website: <http://www.mentalhealth.samhsa.gov/cmhs/MentalHealthStatistics/>

Dr. Judy Hall, Washington State Department of Social and Health Services, leads the MHSIP survey development, and Dr. Molly Brunk, Virginia Commonwealth University, leads the YSS-F survey development. Drs. Hall and Brunk worked in collaboration with NRI, CMHS, MHSIP, and various states throughout development of the surveys and their analyses. Both survey instruments have been tested for reliability and validity. To view these surveys, please visit the MHSIP website at: www.mhsip.org

SAMHSA encourages all states and territories to use the MHSIP and YSS-F surveys and requires this data as part of the Mental Health Block Grant (MHBG) requirements. The MHBG provides Indiana with approximately \$8 million annually in mental health service dollars. Currently, 47 states are using the MHSIP survey. It is noteworthy that 38 states are now using the YSS-F survey, which is an increase of 23 states in three years. The Indiana Block Grant reports can be viewed on the Indiana DMHA website: <http://www.in.gov/fssa/mental/data.htm>

During the original development of the MHSIP and YSS-F surveys, factor analyses were performed to determine the capacity of certain survey items for aggregation into categories. For the MHSIP survey, the five categories are: General Satisfaction, Good Service Access, Quality and Appropriateness, Participation in Treatment Planning, and Positive Service Outcomes. The YSS-F survey categories are: General Satisfaction, Good Service Access, Cultural Sensitivity, Participation in Treatment Planning, and Positive Service Outcomes. To understand how individual survey items were aggregated into categories, see Appendix 4. The provider graphs in this report show the results of the categories, rather than results of individual survey items. Appendix 5 shows the number of survey responses (“N”) for each category.

Survey responses for the MHSIP survey range across 1=Strongly Agree, 2=Agree, 3= I am Neutral, 4=Disagree, and 5=Strongly Disagree and for the YSS-F survey range across 1=Strongly Disagree, 2=Disagree, 3=Undecided, 4=Agree, and 5=Strongly Agree. Data manipulations were performed so that survey responses are in the same direction, i.e., a response of “1” is a positive response (“Strongly Agree”) for both surveys. Consumers can refuse the telephone interview and can refuse to answer any specific survey items.

To learn about new National Outcomes Measure (NOM) federal initiatives and to create your own reports that compare Indiana data to national data, please visit this website: <http://www.nationaloutcomemeasures.samhsa.gov/>

Reliability

Cronbach's alphas were calculated to determine consistency of category (i.e., scale) measurement for the MHSIP survey, using Indiana data. Results show consistency in measurement (reliability) with the exception of the Participation in Treatment Planning category (see Table 7). It is likely that this category would not give the same results over repeated data collections. These findings are consistent with findings from the SFY2003 and SFY2004 Satisfaction Survey Report Card. Note that 47 states used the MHSIP survey, and at least one state used another type of satisfaction survey.

Table 7. MHSIP Adult Survey Category Reliability for Indiana Data

Category	Number of Items	Number of States Reporting Data	Alphas for Indiana data
General Satisfaction	3	48	0.888
Good Service Access	6	48	0.854
Quality & Appropriateness	9	48	0.896
Participation in Treatment Planning	2	47	0.605
Positive Service Outcomes	8	50	0.915

For the YSS-F survey, alphas calculated with Indiana's data were very good, indicating consistency in measurement, with the exception of the Good Service Access category (i.e., scale), as shown in Table 8. It is likely that this category would not give the same results over repeated data collections. These findings are consistent with findings from the SFY2003 and SFY2004 Satisfaction Survey Report Card. Note that 38 states used the YSS-F survey, while numerous states continued to use other types of satisfaction surveys. Fewer states use the YSS-F survey than MHSIP survey because federal requirements for reporting MHSIP survey data for block grants pre-date the same requirements for YSS-F survey data.

Table 8. YSS-F Parent/Caretaker Survey Category Reliability for Indiana Data

Category	Number of Items	Number of States Reporting Data	Alphas for Indiana data
General Satisfaction	6	41	0.934
Good Service Access	2	42	0.540
Cultural Sensitivity	4	38	0.860
Participation in Treatment Planning	3	43	0.742
Positive Service Outcomes	6	42	0.906

Computation of Provider Scores

The following methods, required by the federal government, were used to calculate percent scores for the categories and graphs in this report:

1. Indiana University recodes the YSS-F survey so the values are in the same direction as the MHSIP survey (i.e., the YSS-F survey is recoded to 1=Strongly Agree, 2=Agree, 3=Undecided, 4=Disagree, and 5=Strongly Disagree).
2. "Not Applicable" responses are recoded as missing values, excluding responses with more than 1/3rd of the items in the category missing.
3. For each respondent, for each category, an average (mean) is calculated for all items in the category.
4. For each provider, for each category, the number of average scores are counted that are less than 2.50 (scores that when rounded represent "Agree" or "Strongly Agree" responses).
5. For each provider, for each category, results of Step 4 (number of average scores) are divided by the number (count) of Step 3 scores computed to obtain a percent of favorable responses.

Confidence Interval, Precision, and Confidence Level

Confidence interval and confidence level statistics are important because nearly all health care quality scores are developed using a statistical sampling method, which means that there is some uncertainty about whether the sample reflects the population from which the sample was drawn. Combined, these statistics tell you how confident you can be that the scores found in the sample can represent the scores for the entire population. At the statewide level, we are trying to determine how well the entire sample might reflect all Hoosiers with mental illness. At the provider level, we are trying to determine how well the provider-level sample reflects all consumers of mental health services at that particular provider.

The confidence interval statistic is different from the confidence level statistic. The confidence interval refers to the width of the range around some number, i.e., how wide is the range? For example, a narrow range of 82 to 86 (which is ± 2 of 84) is smaller than a wider range of 80 to 90 (which is ± 5 of 85). Confidence intervals with wide ranges are described as less precise, while confidence intervals with narrow ranges are described as more precise. “Precision” refers to the range within which the true value of the larger population is estimated to be.

The confidence level, which is often set at 95% to 99% in social science research, tells you how likely or certain it is that a score will fall within the confidence interval range. For example, a 95% confidence level means that it is highly likely (95% likely) that a score will fall within the confidence interval range. Lower confidence levels, such as 80% or 90%, provide less certainty.

Putting the confidence interval and the confidence level together gives you an indication of how well the sample can represent the larger population. For example, with a small interval range of 82 to 86, and a confidence level of 99%, we can be very certain about the population scores: they are extremely likely (99%) to fall between 82 and 86, which is a high level of precision. We can then be very confident that the scores found in our sample are representative of the scores we would find in the larger population.

Below, statewide and per-provider sample validity for the data used in this report are discussed. The statewide sample size has more precision than the per-provider sample size. This does not mean that the survey results at the provider level are less accurate than results at the statewide level: at the provider level, results are less precise because they are calculated from smaller samples, which have larger confidence intervals. Smaller samples were chosen to control costs of this survey. The sample sizes at the provider level give around an 8.9% confidence interval at a 90% confidence level. Thus we can be 90% certain that scores in the larger provider population will be within an 8.9% interval of the scores we found in our samples. See Appendices 1 and 2 for per-provider confidence intervals.

Sample Size Validity, Statewide and Per Provider

Statewide Sample Size Validity: Indiana University Center for Survey Research (CSR) collected a total of 4,025 surveys (2,009 adult consumer surveys and 2,016 parent/caretaker of children/adolescents survey) in order to achieve the required per-provider sample size. Appendix 3 shows the Final Dispositions of the telephone survey methodology. Once data went through final DMHA revisions, there were 4,012 surveys (2,006 adult and 2,006 parent/caretaker). The total sample required to achieve a $\pm 2.5\%$ confidence interval (precision rate) at a 95% confidence level for the adult survey was 1,490 and for the parent/caretaker survey was 1,457, thus the total sample size was highly precise. Results can be generalized from that total sample to the entire population of adults and children with mental illness served by Indiana providers.

Per Provider Sample Size Validity: For the MHSIP adult survey, per-provider confidence intervals at a 90% confidence level ranged from $\pm 7.75\%$ to $\pm 9.30\%$, with one outlier at 10.17% and another one at 12.05% (due to very small sample size). For the YSS-F parent/ caretaker survey at a 90% confidence level, confidence intervals ranged from $\pm 7.30\%$ to $\pm 9.16\%$, with one outlier at 11.58% and another at 13.49% (again, due to very small sample size). At an 80%

confidence level, confidence intervals are smaller. See Appendices 1 and 2 for per-provider confidence intervals.

These results indicate that, in general for both the MHSIP survey and YSS-F survey results, we can be quite certain (90%) that the larger population of adults and children who are receiving mental health services at a given provider would have the same scores as the sample scores at that provider, within an average range of around $\pm 8.8\%$ to $\pm 9.0\%$.

True Difference in Consumer Satisfaction

Confidence intervals give a sense of the degree of reliable differences between providers. In this report card, true statistical difference indicates real difference in consumer satisfaction. If a category score for Center A is 80%, $\pm 5\%$, and for Center B is 85%, $\pm 5\%$, the overlap in confidence intervals between them (80 to 85) indicates that any obtained difference between the provider samples may not be reliable; in short, there may be no real difference in the scores found at each of the providers, indicating that these providers have the same consumer satisfaction levels. When confidence intervals overlap, the scores (and therefore the providers) are basically comparable. Conversely, if the confidence intervals do not overlap, this indicates the possibility of statistically significant differences between the providers.

Provider averages on the category scores for the MHSIP adult survey range from 68.0% to 87.4%. Provider averages on the category scores for the YSS-F survey range from 70.8% to 86.7%. No one provider is significantly different from any other provider on the MHSIP survey scores or on the YSS-F survey scores. In other words, consumers of mental health services are equally satisfied with all providers. Analysis of variance supports the result that no one category achieved significance (see Appendix 6).

It should be noted that statistical significance is not the same as practical significance. With a very large sample size, every difference may be statistically significant, but that doesn't necessarily mean that the differences have practical value. Does a very small difference (e.g., 89% versus 90%) really matter? Will consumers experience substantial differences in outcomes because of minor differences in scores? The answer is unknown, but caution should be used when evaluating one provider against another.

Glossary

CMHS: The Center for Mental Health Services, which is a federal center under Health and Human Services (HHS), SAMHSA.

Confidence interval: Confidence interval is the range in which the true value of the population is estimated to be. This range is often expressed in percentage points, (e.g., $\pm 2.5\%$). Thus, if the report card states that 83% of consumers in the sample gave a positive response with a confidence interval of $\pm 2.5\%$, then it can be concluded that between 80.5% and 85.5% of consumers in the population have would give a positive response.

Confidence level: Using the 95% confidence level when determining sample size allows us to say that 95 out of 100 samples drawn would given us the same values (within the range of confidence interval discussed above) as the values we achieved. There is a small chance that the sample drawn does not represent the true population value.

Consumer: A person who receives mental health services.

Continuum of Care: A core set of mental health services that mental health service providers, who are contracting with the Division of Mental Health and Addiction, must offer to consumers. These services include the following:

1. Individualized treatment planning to increase coping skills and symptom management, which may include any combination of services listed below.
2. Twenty-four hour a day crisis intervention.
3. Case management to fulfill individual consumer needs, including assertive case management when indicated.
4. Outpatient services, including intensive outpatient services, substance abuse services, counseling, and treatment.
5. Acute stabilization services including detoxification services.
6. Residential services.
7. Day treatment.
8. Family support services.
9. Medication evaluation and monitoring.
10. Services to prevent unnecessary and inappropriate treatment and hospitalization and the deprivation of a person's liberty.

Degree of Variability: Refers to the distribution of the attributes being measures in the population. The less variable (more homogeneous) the population, the smaller the sample size. A proportion of 50% indicates the greatest level of variability, while 20% or 80% indicate less variability (greater homogeneity).

Division of Mental Health and Addiction (DMHA): The Indiana Family and Social Services Administration (FSSA) division that regulates and certifies mental health services in Indiana.

Hoosier Assurance Plan (HAP): The Division of Mental Health and Addiction care strategy for the method of funding and the delivery of mental health and addiction services by the state of Indiana.

Mental Illness: All forms of illness in which psychological, emotional, or behavioral disturbances are the dominating feature and which can substantially diminish the capacity for coping with ordinary demands of life.

MHSIP: Mental Health Statistics Improvement Program

NASMHPD: National Association of State Mental Health Program Directors

NRI: National Association of State Mental Health Program Directors Research Institute

Outcomes: A form of measuring consumer experience designed to help consumers, payers, and providers make rational health care choices based on better insight into the effect of these choices on the consumer's life.

Population: A complete set of individuals having some common observable characteristic. In this report the population is all consumers served by DMHA-contracted mental health providers.

Poverty: As defined by the federal government, a person is in poverty if the household in which the person resides has an annual income below a predetermined level.

SAMHSA: The Substance Abuse and Mental Health Services Administration, which is a federal agency under Health and Human Services (HHS).

Sample: A portion or subset of the entire population that is used to make inferences about the entire population.

Serious Emotional Disturbance (Children/Adolescents): The Division of Mental Health and Addiction definition of serious emotional disturbance, which is also the federal definition, is as follows:

1. The child has a mental illness diagnosis under the DSM-IV-TR, published by the American Psychiatric Association.
2. The child experiences significant functional impairments in at least one of the following areas:
 - a) Activities of daily living.
 - b) Interpersonal functioning.
 - c) Concentration, persistence, and pace.
 - d) Adaptation to change.
3. The duration of the disorder has been, or is expected to be, in excess of twelve months. However, children who have experienced a situational trauma, and who are receiving services in two or more community agencies, do not have to meet the durational requirement of this clause.

Seriously Mentally Ill (Adults): The Division of Mental Health and Addiction definition of seriously mentally ill adult, which is also the federal definition, is as follows:

1. The individual has a mental illness diagnosis under the Diagnostic and Statistical Manual of Mental Disorders, 4th edition (DSM IV-TR), published by the American Psychiatric Association.
2. The individual experiences significant functional impairment in two of the following areas:
 - a) Activities of daily living.
 - b) Interpersonal functioning.
 - c) Concentration, persistence, and pace.
 - d) Adaptation to change.
3. The duration of the mental illness has been, or is expected to be, in excess of twelve months. However, adults who have experienced a situational trauma do not have to meet the durational requirement of this clause.

State Fiscal Year (SFY): In Indiana, the one-year period of time from July 1 of one year to June 30 of the following year.

Appendix 4. Individual Survey Items that are Aggregated into Categories

The below survey questions are the actual questions asked on the MHSIP (adult) survey and the YSS-F (parent/caretaker) survey.

MHSIP Adult Survey

General Satisfaction

- I liked the services that I received here.
- If I had other choices, I would still get services at this agency.
- I would recommend this agency to a friend or family.

Good Service Access

- The location of services was convenient.
- Staff was willing to see me as often as I felt it was necessary.
- Staff returned my calls within 24 hours.
- Services were available at times that were good for me.
- I was able to get all the services I thought I needed.
- I was able to see a psychiatrist when I wanted to.

Quality & Appropriateness

- Staff believed that I could grow, change and recover.
- I felt free to complain.
- I was given information about my rights.
- Staff encouraged me to take responsibility for how I live my life.
- Staff told what side effects to watch for.
- Staff respected my wishes about who is and is not to be given information about my treatment.
- Staff was sensitive to my cultural/ethnic background.
- Staff helped me obtain the information needed so I could take charge of managing my illness.
- I was encouraged to use consumer-run programs.

Participation in Treatment Planning

- I felt comfortable asking questions about my treatment and medications.
- I, not staff, decided my treatment goals.

Positive Service Outcomes

- I deal more effectively with daily problems.
- I am better able to control my life.
- I am better able to deal with crisis.
- I am getting along better with my family.
- I do better in social situations.
- I do better in school and/or work.
- My housing situation has improved.
- My symptoms are not bothering me as much.

YSS-F Parent/Caretaker Survey

General Satisfaction

- Overall, I am satisfied with the services my child received.
- The people helping my child stuck with us no matter what.
- I felt my child had someone to talk to when he/she was troubled.
- The services my child and/or family received were right for us.
- My family got the help we wanted for my child.
- My family got as much help as we needed for my child.

Good Service Access

- The location of services was convenient for us.
- Services were available at times that were convenient for us.

Quality & Appropriateness or Cultural Sensitivity

- Staff treated me with respect.
- Staff respected my family's religious/spiritual beliefs.
- Staff spoke with me in a way that I understood.
- Staff was sensitive to my cultural/ethnic background.

Participation in Treatment Planning

- I helped to choose my child's services.
- I helped to choose my child's treatment goals.
- I participated in my child's treatment.

Positive Service Outcomes

- My child is better at handling daily life.
- My child gets along better with family members.
- My child gets along better with friends and other people.
- My child is doing better in school and/or work.
- My child is better able to cope when things go wrong.
- I am satisfied with our family life right now.
